

Amendments to the Claims

Please cancel Claims 10 and 74 and amend Claims 1-2, 7-9, 13-15, 18, 20, 27, 46, 48, 50-56, 58, 65-66, 71-73, 77-78, 81-82, 84-85, 100-106, and 113-121. The Claim Listing below replaces all prior versions of the claims in the application:

Claim Listing

1. (Currently Amended) A computerized system for retrieving electronic content collected from an electronic address over time, the electronic content associated with an internetworked content provider, comprising:
 - a data warehouse storing a plurality of data files, including an archived original content file ~~eopies of original electronic content~~ as collected from an electronic address;
 - a searchable electronic index of ~~the electronic~~ original content stored in the ~~data warehouse~~ archived original content file;
 - a query engine in communication with the electronic index;
 - a user interface in communication with the query engine for soliciting a query from a user for desired content, the desired content having a match to original content stored in the archived original content file; and
 - a query result presented to the user in response to the query and the electronic index, the query result including a reference to the archived original content file ~~eopy of original content~~ from the data warehouse ~~matcheing the desired content and Internet domain registration~~ information related to a content provider associated with the electronic address at the time the archived original content file was collected.
2. (Currently Amended) The system of Claim 1 wherein the query solicits desired content of at least one of a text string[[],] or a multimedia target.
3. (Original) The system of Claim 1 wherein the data warehouse is located remote from the user interface.

4. (Original) The system of Claim 1 wherein the query result is not presented in real time.
5. (Previously Presented) The system of Claim 1 wherein the user interface includes a search engine result identifying a Universal Resource Locator.
6. (Original) The system of Claim 5 wherein the Universal Resource Locator is responsive to the solicitation for a query.
7. (Currently Amended) The system of Claim 1 wherein the query result includes a history of changes to the electronic content data files collected from the electronic address over time.
8. (Currently Amended) The system of Claim 1 wherein the query result includes a history of changes to the Internet domain name information over time.
9. (Currently Amended) The system of Claim 8 wherein the changes include changes to an Internet domain name information registration over time.
10. (Cancelled)
11. (Original) The system of Claim 1 wherein the query results are responsive to a query specifying a trademark.
12. (Original) The system of Claim 1 wherein the query results are responsive to a query specifying a work of authorship.
13. (Currently Amended) A system for storing information for retrieval, comprising:
a database storing data in an organized structure, the data associated with a plurality of data files, including an archived original content file as stored copies of

~~electronic content~~ collected from an electronic address over time, the electronic content associated with a content provider;

a plurality of modules populating the database with data associated with ~~the data files electronic content stored at an electronic address~~;

a searchable electronic index of the ~~archived original content file~~ electronic content stored in the database;

a query engine in communication with the electronic index; and

a query engine for retrieving the stored data based on a query parameter and the electronic index.

14. (Currently Amended) The system of Claim 13 further comprising an archive storing the ~~copies of electronic content data files~~ in perpetuity.
15. (Currently Amended) The system of Claim 14 wherein the database includes references to the ~~stored copies of electronic content data files~~ for retrieval from the archive.
16. (Previously Presented) The system of Claim 13 wherein the content provider includes a content provider selected from at least one of a domain name service registry and a web server.
17. (Previously Presented) The system of Claim 13 wherein the modules communicate with the electronic address over a public access computer network.
18. (Currently Amended) The system of Claim 13 further comprising an indexer, the indexer creating the searchable electronic index ~~of the stored copies of electronic content~~.
19. (Previously Presented) The system of Claim 13 wherein the searchable electronic index includes multimedia data.

20. (Currently Amended) A computerized system for storage and retrieval of content from a plurality of Internet content providers, the content including registration content and page content, the system comprising:
 - a data warehouse structured to store content for later retrieval; and
 - a registration retrieval mechanism in communication with a plurality of Internet domain name registries for retrieving registration content for a plurality of content providers and storing the retrieved content in the data warehouse over time;
 - a mechanism for associating the retrieved registration content with a respective time stamp, the time stamp indicating the time that the registration content was retrieved from the respective Internet domain name registry; and
 - a searchable electronic index of the registration content stored in the database data warehouse.
21. (Original) The system of Claim 20 further comprising a page retrieval mechanism in communication with a content provider for retrieving page content from the content providers and storing the retrieved content in the data warehouse.
22. (Original) The system of Claim 20 wherein the data warehouse includes a database structure for managing the stored content.
23. (Cancelled)
24. (Previously Presented) The system of Claim 20 wherein the indexer is a multimedia indexer.
25. (Previously Presented) The system of Claim 20 further comprising a query engine coupled to the indexer for retrieving stored content.
26. (Original) The system of Claim 25 wherein the query engine includes a program interface operable by a remote computer.

27. (Currently Amended) A computerized system for archiving information from a plurality of internetworked web content providers, comprising:
 - an identifier of a web content provider stored in a data warehouse;
 - for the web content provider, information stored in the data warehouse including:
 - a ~~copy record of ownership~~ registration data;
 - a ~~copy of source code file having instructions~~ for operating [[a]] web browsers;
 - a ~~file having an image copy of a browser-rendered display generated by a web browser as instructed~~ by the source code files file; and
 - a database associating the web content provider with the stored information.
28. (Original) The system of Claim 27 wherein the identifier is a unique address of the web content provider.
29. (Original) The system of Claim 28 wherein the unique address is a domain name derived from a domain name registry.
30. (Original) The system of Claim 27 wherein the stored information is compressed.
31. (Original) The system of Claim 27 wherein the stored information includes a copy of a multimedia file.
32. (Original) The system of Claim 27 further comprising an indexer operating on the stored information.
33. (Original) The system of Claim 32 wherein the indexer includes a digital signature engine operating on multimedia files.

34. (Original) The system of Claim 27 further comprising a user interface for querying the data warehouse.
35. (Original) The system of Claim 34 wherein the user interface is operable by a remote computer.
36. (Original) The system of Claim 35 wherein the remote computer includes a search engine interface.
37. (Original) The system of Claim 27 further comprising web robots to retrieve information from a remote content provider.
38. (Original) The system of Claim 37 wherein the remote content provider is a registry storing the registration data.
39. (Original) The system of Claim 37 wherein the remote content provider is the web content provider storing the source code.
40. (Original) The system of Claim 27 further comprising a processing module to monitor changes to source code at the web content provider, based on the stored source code.
41. (Original) The system of Claim 40 wherein the data warehouse stores a prior version and a current version of a changed source code file.
42. (Original) The system of Claim 27 further comprising a processing module to monitor changes to registration data at a registration content provider based on the stored registration data.
43. (Original) The system of Claim 42 wherein the data warehouse stores a prior version and a current version of changed registration data.

44. (Original) The system of Claim 27 wherein the data warehouse includes an offline storage medium.
45. (Original) The system of Claim 27 wherein the web content provider supports a protocol to facilitate the archival of information.
46. (Currently Amended) A computerized system for archiving data from a plurality of distinct content providers, each content provider having bibliographical ownership information, the bibliographical ownership information being changeable over time, the system comprising:
an identification for each content provider of a plurality of content providers; and
a mechanism that stores, for each identified content provider, each version of the bibliographical ownership information in association with a time stamp in a data archive for later retrieval.
47. (Original) The system of Claim 46 wherein the content providers are registered in a shared registry system.
48. (Currently Amended) The system of Claim 47 wherein the stored bibliographical ownership information includes registration data associated with the registry.
49. (Original) The system of Claim 47 wherein the content provider is identified by a unique address.
50. (Currently Amended) The system of Claim 46 wherein the mechanism includes a data compression algorithm to reduce the size of the bibliographical ownership information before storing in the data archive.

51. (Currently Amended) The system of Claim 46 further comprising a database structure associating each content provider with its stored bibliographical ownership information.
52. (Currently Amended) The system of Claim 51 wherein the database structure tracks changes to the stored bibliographical ownership information over time.
53. (Currently Amended) The system of Claim 46 wherein the stored bibliographical ownership information is maintainable in perpetuity.
54. (Currently Amended) The system of Claim 46 further comprising an indexer for maintaining a searchable index of the stored bibliographical ownership information.
55. (Currently Amended) The system of Claim 54 wherein the stored bibliographical ownership information is multimedia content.
56. (Currently Amended) The system of Claim 54 further comprising a query engine coupled to the indexer for processing queries against the stored bibliographical ownership information.
57. (Original) The system of Claim 56 wherein the query engine includes a program interface operable by a remote computer.
58. (Currently Amended) A computerized system for monitoring intellectual property rights across a plurality of internetworked content providers, comprising:
 - an identifier of a plurality of web content providers;
 - for each of a plurality of web content provider, seachable searchable information stored in the data archive including:
 - a copy record of Internet domain name registration data associated with the content provider;

~~a copy of a source code file having instructions for operating [[a]] web browsers as specified by the web content provider;~~

~~a copy file having an image of a browser-rendered display generated by a web browser as instructed by the source code file;~~

~~a database associating web content providers with the stored information and associating the stored information with a time stamp;~~

~~a querying interface to the data archive to solicit information related to an intellectual property right the searchable information and a specified time; and~~

~~a report responsive to the query solicited information, the report including archived information associated at least one content provider.~~

59. (Original) The user interface of Claim 58 wherein the solicited information is at least one of a trademark, a work of authorship, or an invention.

60. (Original) The user interface of Claim 58 wherein the solicited information is entered as a file location.

61. (Original) The user interface of Claim 60 wherein the file is at least one of a text file, an audio file, an image file, or a video file.

62. (Original) The user interface of Claim 58 wherein the report includes archived information associated with a plurality of network registrars.

63. (Original) The user interface of Claim 58 wherein the report includes archived information from a plurality of web content providers.

64. (Original) The user interface of Claim 58 wherein the archived information includes obsolete information.

65. (Currently Amended) A computerized method for retrieving electronic content collected from an electronic address over time, the electronic content associated with an internetworked content provider, comprising:

in a data warehouse, storing a plurality of data files, including an archived original content file copies of original electronic content as collected from an electronic address;

storing a searchable electronic index of the electronic original content stored in the data warehouse archived original content file;

providing a query engine in communication with the electronic index;

soliciting a query from a user for desired content through a user interface in communication with the query engine, the desired content having a match to original content stored in the archived original content file;

presenting a query result to the user in response to the query and the electronic index, the query result including a reference to the archived original content file copy of original content from the data warehouse matching the desired content and Internet domain registration information related to a content provider associated with the electronic address at the time the archived original content file was collected.

66. (Currently Amended) The method of Claim 65 wherein soliciting comprises a query including desired content of at least one of a text string[[,]] or a multimedia target.

67. (Original) The method of Claim 65 wherein the data warehouse is located remote from the user interface.

68. (Original) The method of Claim 65 wherein presenting the query result is not performed in real time with the query.

69. (Previously Presented) The method of Claim 65 wherein soliciting comprises identifying a Universal Resource Locator through a search engine result.

70. (Original) The method of Claim 69 wherein the Universal Resource Locator is responsive to the solicitation for a query.
71. (Currently Amended) The method of Claim 65 wherein the query result includes a history of changes to the eleetronic content data files collected from the electronic address over time.
72. (Currently Amended) The method of Claim 65 wherein the query result includes a history of changes to the Internet domain name information over time.
73. (Currently Amended) The method of Claim 72 wherein the changes include changes to an Internet domain name registration information over time.
74. (Cancelled)
75. (Original) The method of Claim 65 wherein the query results are responsive to a query specifying a trademark.
76. (Original) The method of Claim 65 wherein the query results are responsive to a query specifying a work of authorship.
77. (Currently Amended) A method for storing information for retrieval, comprising:
 - storing data in an organized structure in a database, the data associated with a plurality of data files, including an archived original content file as stored copies of eleetronic content collected from an electronic address over time, the electronic content associated with a content provider;
 - from a plurality of modules, populating the database with the data files eleetronic content stored at an electronic address;
 - creating a searchable electronic index of the archived original content file eleetronic content stored in the database;

providing a query engine in communication with the electronic index; and retrieving the stored data based on a query parameter and the electronic index.

78. (Currently Amended) The method of Claim 77 further comprising storing the ~~copies of electronic content in an archive~~ data files in perpetuity.

79. (Previously Presented) The method of Claim 77 wherein the content provider includes a content provider selected from at least one of a domain name service registry and a web server.

80. (Previously Presented) The method of Claim 77 wherein the modules communicate with the electronic address over a public access computer network.

81. (Currently Amended) The method of Claim 77 further comprising an indexer, the indexer creating the searchable electronic index ~~of the stored copies of electronic content~~.

82. (Currently Amended) A computerized method for storage and retrieval of content from a plurality of Internet content providers, the content including registration content and page content, the method comprising:
storing content for later retrieval in a data warehouse; and
retrieving registration content for a plurality of web content from a plurality of Internet domain name registries providers and storing the retrieved registration content in the data warehouse over time;
associating the retrieved registration content with a respective time stamp, the time stamp indicating the time that the registration content was retrieved from the respective Internet domain name registry; and
creating a searchable electronic index of the registration content stored in the database data warehouse.

83. (Original) The method of Claim 82 further comprising retrieving page content from the web content providers and storing the retrieved page content in the data warehouse.
84. (Currently Amended) The method of Claim 82 further comprising accessing the ~~seaehable~~ searchable electronic index using a query engine.
85. (Currently Amended) A computerized method for archiving information from a plurality of internetworked web content providers, comprising:
 - storing an identifier of a web content provider in a data warehouse;
 - for the web content provider, storing information in the data warehouse including:
 - a copy record of ownership registration data;
 - a copy of source code file having instructions for operating [[a]] web browsers;
 - a file having an image copy of a browser-rendered display generated by a web browser as instructed by the source code files file; and
 - associating the web content provider with the stored information in a database.
86. (Original) The method of Claim 85 wherein the identifier is a unique address of the web content provider.
87. (Original) The method of Claim 86 wherein the unique address is a domain name derived from a domain name registry.
88. (Original) The method of Claim 85 wherein the stored information is compressed.
89. (Original) The method of Claim 85 wherein the stored information includes a copy of a multimedia file.
90. (Original) The method of Claim 85 further comprising operating on the stored information using an indexer.

91. (Original) The method of Claim 90 wherein the indexer includes a digital signature engine operating on multimedia files.
92. (Original) The method of Claim 85 further comprising for querying the data warehouse through a user interface.
93. (Original) The method of Claim 92 wherein the user interface is operable by a remote computer.
94. (Original) The method of Claim 93 wherein the remote computer includes a search engine interface.
95. (Original) The method of Claim 85 further comprising operating web robots to retrieve information from a remote content provider.
96. (Original) The method of Claim 95 wherein the remote content provider is a registry storing the registration data.
97. (Original) The method of Claim 85 further comprising monitoring changes to source code at the web content provider, based on the stored source code.
98. (Original) The method of Claim 85 further comprising monitoring changes to registration data at a registration content provider based on the stored registration data.
99. (Original) The method of Claim 85 wherein the data warehouse includes an offline storage medium.
100. (Currently Amended) A computerized method for archiving data from a plurality of distinct content providers, each content provider having bibliographical ownership

information, the bibliographical ownership information being changeable over time, the method comprising:

storing an identification for each content provider of a plurality of content providers; and

storing, for each identified content provider, each version of the bibliographical ownership information in association with a time stamp in a data archive for later retrieval.

101. (Currently Amended) The method of Claim 100 wherein the bibliographical ownership information includes registration data associated with a shared registry.
102. (Currently Amended) The method of Claim 100 wherein storing the content comprises using a data compression algorithm to reduce the size of the bibliographical ownership information before storing in the data archive.
103. (Currently Amended) The method of Claim 100 further comprising tracking changes to the stored bibliographical ownership information over time.
104. (Currently Amended) The method of Claim 100 wherein the stored bibliographical ownership information is maintainable in perpetuity.
105. (Currently Amended) The method of Claim 100 further comprising maintaining a searchable index of the stored bibliographical ownership information.
106. (Currently Amended) A method for monitoring intellectual property rights across a plurality of internetworked content providers, comprising:
 - providing an identifier of a plurality of web content providers;
 - for each of a plurality of content provider, ~~storing searchable~~ storing searchable information in the data archive, including:

a copy record of Internet domain name registration data associated with the content provider;

 a copy of a source code file having instructions for operating [[a]] web browsers as specified by the web content provider;

 a copy file having an image of a browser-rendered display generated by a web browser as instructed by the source code file;

in a database, associating web content providers with the stored information and associating the stored information with a time stamp;

 soliciting information from the data archive related to an intellectual property right the searchable information and a specified time; and

 presenting a report responsive to the query solicited information, the report including archived information associated at least one content provider.

107. (Original) The method of Claim 106 wherein the solicited information is at least one of a trademark, a work of authorship, or an invention.

108. (Original) The method of Claim 106 wherein soliciting information comprises entering a file location.

109. (Original) The method of Claim 108 wherein the file is at least one of a text file, an audio file, an image file, or a video file.

110. (Original) The method of Claim 106 wherein the report includes archived information associated with a plurality of network registrars.

111. (Original) The method of Claim 106 wherein the report includes archived information from a plurality of web content providers.

112. (Original) The method of Claim 106 wherein the archived information includes obsolete information.

113. (Currently Amended) An article of manufacture, comprising:

 a computer-usable medium; and

 a set of computer instructions on the medium, the instructions including a method for retrieving electronic content collected from an electronic address over time, the electronic content associated with an internetworked content provider, comprising instructions for:

 in a data warehouse, storing a plurality of data files, including an archived original content file copies of original electronic content as collected from an electronic address;

 storing a searchable electronic index of ~~the electronic~~ original content stored in the ~~data warehouse~~ archived original content file;

 providing a query engine in communication with the electronic index;

 soliciting a query from a user for desired content through a user interface in communication with the query engine, the desired content having a match to original content stored in the archived original content file;

 presenting a query result to the user in response to the query and the electronic index, the query result including a reference to the archived original content file copy of original content from the data warehouse matching the desired content and Internet domain registration information related to a content provider associated with the electronic address at the time the archived original content file was collected.

114. (Currently Amended) An article of manufacture, comprising:

 a computer-usable medium; and

 a set of computer instructions on the medium, the instructions including a method for storing information for retrieval, comprising instructions for:

 storing data in an organized structure in a database, the data associated with a plurality of data files, including an archived original content file as stored

~~copies of electronic content collected from an electronic address over time, the electronic content associated with a content provider;~~

~~from a plurality of modules, populating the database with the data files electronic content stored at an electronic address;~~

~~creating a searchable electronic index of the archived original content file electronic content stored in the database;~~

~~providing a query engine in communication with the electronic index; and retrieving the stored data based on a query parameter and the electronic index.~~

115. (Currently Amended) An article of manufacture, comprising:

a computer-usable medium; and

a set of computer instructions on the medium, the instructions including a computerized method for storage and retrieval of content from a plurality of Internet content providers, the content including registration content and page content, the method comprising instructions for:

storing content for later retrieval in a data warehouse; and

retrieving registration content for a plurality of web content from a plurality of Internet domain name registries providers and storing the retrieved registration content in the data warehouse over time;

associating the retrieved registration content with a respective time stamp, the time stamp indicating the time that the registration content was retrieved from the respective Internet domain name registry; and

creating a searchable electronic index of the registration content stored in the database data warehouse.

116. (Currently Amended) An article of manufacture, comprising:

a computer-usable medium; and

a set of computer instructions on the medium, the instructions including a computerized method for archiving information from a plurality of internetworked web content providers, comprising instructions for:

storing an identifier of a web content provider in a data warehouse;
for the web content provider, storing information in the data warehouse including:
a copy record of ownership registration data;
a copy of source code file having instructions for operating [[a]] web browsers;
a file having an image copy of a browser-rendered display generated by a web browser as instructed by the source code files file; and
associating the web content provider with the stored information in a database.

117. (Currently Amended) An article of manufacture, comprising:

a computer-usuable medium; and
a set of computer instructions on the medium, the instructions including a method for archiving data from a plurality of distinct content providers, each content provider having bibliographical ownership information, the bibliographical ownership information being changeable over time, the method comprising instructions for:

storing an identification for each content provider of a plurality of content providers; and
storing, for each identified content provider, each version of the bibliographical ownership information in association with a time stamp in a data archive for later retrieval.

118. (Currently Amended) An article of manufacture, comprising:

a computer-usuable medium; and

a set of computer instructions on the medium, the instructions including a method for monitoring intellectual property rights across a plurality of internetworked content providers, comprising instructions for:

providing an identifier of a plurality of web content providers;

for each of a plurality of content provider, storing searchable information in the data archive, including:

a copy record of Internet domain name registration data associated with the content provider;

a copy of a source code file having instructions for operating [[a]] web browsers as specified by the web content provider;

a copy file having an image of a browser-rendered display generated by a web browser as instructed by the source code file;

a database associating web content providers with the stored information and associating the stored information with a time stamp;

soliciting information from the data archive related to an intellectual property right the searchable information and a specified time; and

presenting a report responsive to the query information, the report including archived information associated at least one content provider.

119. (Currently Amended) The system of Claim 1 further comprising a database for relating the stored copies of original electronic content archived original content file and the Internet domain registration information related to a content provider based on a time that the copies of original electronic content were archived copy of the original content file was collected from the content providers electronic address.
120. (Currently Amended) The system of Claim 13 wherein the database relates the stored copies of original electronic content archived original content file with a time that the copies of original electronic content were archived copy of the original content file was collected from the content providers electronic address.

121. (Currently Amended) The system of Claim 22 wherein the database structure relates the stored domain name registration content with a time that the domain name registration content was collected for the data warehouse.
122. (Previously Presented) The system of Claim 27 wherein the database relates the stored information with a time that the information was collected for the data warehouse.
123. (Previously Presented) The system of Claim 51 wherein the database structure relates the stored content with a time that the content was collected for the archive.
